- Create an Oracle Cloud Account: Sign up for an Oracle Cloud free tier account, which offers free access to Autonomous Database with APEX pre-installed.
- Provision an Autonomous Database: Use the cloud console to create an Autonomous Transaction Processing (ATP) database, selecting the APEX deployment option.
- Access APEX Workspace: Once the database is ready, navigate to the APEX URL provided, log in with the administrator credentials, and create new workspaces for your projects.

Installing APEX Locally

While Oracle recommends cloud deployment for simplicity, installing APEX locally involves:

- Installing Oracle Database (Express Edition or Enterprise Edition)
- Downloading the latest APEX release from Oracle's official website
- Running the installation scripts to configure APEX within your database
- Accessing APEX via a web browser on your local machine

Core Components of Oracle APEX Development

Understanding the building blocks of APEX is vital for efficient application development.

- Workspaces and Users
 - Workspaces: Logical containers for applications, data, and users. They enable multi-tenancy and access control.
 - Users: Assign roles and privileges to control what each user can view or modify within a workspace.
- Application Builder

The main interface for creating, editing, and managing applications. Features include:

- Visual page design
 - Component placement
 - Dynamic actions
 - Shared components (menus, templates, lists)
-
- SQL Workshop

A dedicated environment for writing, testing, and executing SQL queries, scripts, and PL/SQL code. Crucial for database management and data manipulation.

- App Gallery and Templates

Pre-built application templates and themes that accelerate development and ensure UI consistency.

Building Your First Application in Oracle APEX

A practical step-by-step process to create a simple CRUD (Create, Read, Update, Delete) application.

Step 1: Create a Workspace and Login

- Sign into your Oracle APEX environment.
- Create a new workspace or select an existing one.
- Log in with your workspace credentials.

Step 2: Prepare Your Data

- Use SQL Workshop > SQL Scripts to create a sample table, e.g., `EMPLOYEES`:

```
```sql
```

```
CREATE TABLE EMPLOYEES (
```

```
EMP_ID NUMBER PRIMARY KEY,
```

```
FIRST_NAME VARCHAR2(50),

LAST_NAME VARCHAR2(50),

EMAIL VARCHAR2(100),

PHONE_NUMBER VARCHAR2(20),

HIRE_DATE DATE,

JOB_ID VARCHAR2(10),

SALARY NUMBER(8,2)

);

...
```

- Populate with sample data using INSERT statements.

### Step 3: Create a New Application

- Navigate to Application Builder > Create.
- Choose "From Scratch" or use a wizard.
- Select the data source (e.g., the `EMPLOYEES` table).
- Name your application and specify settings like theme and navigation.

### Step 4: Add Pages

- Use the page creation wizard to add:
  - Interactive Grid or Report: For displaying employee data.
  - Form Pages: For inserting and editing records.
  - Detail Pages: To view individual records.

### Step 5: Customize UI and Behavior

- Adjust layouts, themes, and colors.
- Add dynamic actions, validations, and processes, such as:
  - Confirm before delete
  - Automatic calculations
  - Conditional formatting

## Step 6: Test and Deploy

- Use the built-in preview feature to test functionality.
- Deploy to users by granting appropriate access rights.
- Optionally, configure security settings for SSL, authentication, and authorization.
